

POOL SPECIFICATIONS

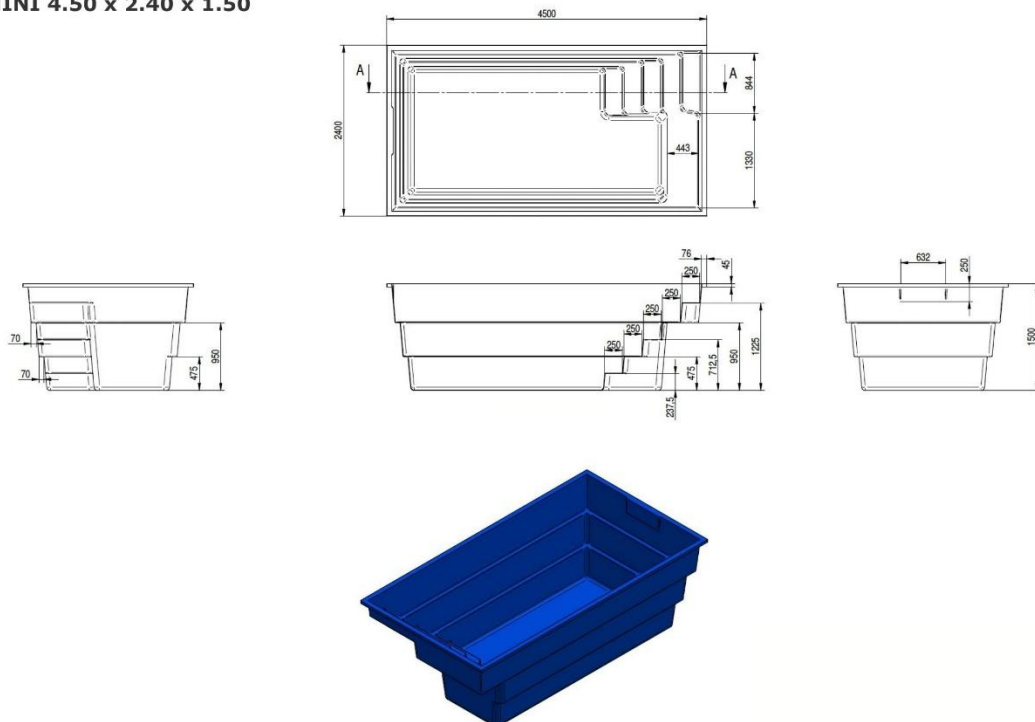

Our pools are manufactured from premium-quality polyethylene, enhanced with an additive that provides UV15 protection. Polyethylene is a highly durable and flexible polymer with exceptional tensile strength, making the pool shell extremely resistant to environmental impacts. This ensures suitability for both outdoor and indoor installation, and in the event of external damage, repairs can be carried out easily – even by the owner.

We manufacture two standard sizes: the larger measuring **6 × 3 × 1.5 m** and the smaller **4.5 × 2.4 × 1.5 m**, with technical drawings provided below.

MAX 6.00 x 3.00 x 1.50

MINI 4.50 x 2.40 x 1.50

Thanks to our manufacturing technology, the pool shells are free from adhesives and welding joints, eliminating issues such as cracking, tearing, or breakage associated with these methods.

The wall thickness of the pool shell ranges between 7 and 12 mm, with no reduction below 7 mm in curved sections or at the base.
